PROFESSIONAL SUMMARY

Full Stack Developer with 6+ years of experience engineering scalable ERP systems and high-throughput web applications. Specialized in integrating production-ready AI solutions (Claude API, MCP, RAG, function calling). Focused on joining remote-first engineering teams that value clean architecture, maintainable code, and measurable business impact.

KEY IMPACT & HIGHLIGHTS

- **2,600x Performance Optimization:** Reduced query execution and batch report generation times for massive datasets (500K+ records) from 18 hours to ~25 seconds via deep database indexing, SQL query optimization, and batch processing.
- **Production ERP Architecture:** Architected and deployed 30+ enterprise ERP modules serving 100+ corporate clients across banking, insurance, automotive, and construction sectors, supporting 200+ concurrent users per server.
- **Production AI Automation:** Designed and integrated an autonomous AI agent (Claude + MCP) within a ticketing CRM, automating classification, triage, and routing for ~300 tickets/month.
- **End-to-End Solo Delivery:** Delivered 2 full-scale web platforms as sole developer, handling the complete software lifecycle from system design to cloud deployment and ongoing maintenance.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, PHP, Python, SQL
- **Mobile / Cross-Platform:** React Native
- **Frontend:** React, Next.js, Vue.js, Livewire, Inertia.js, Tailwind CSS
- **Backend:** Symfony, Laravel, Node.js, RESTful APIs
- **AI & Automation:** Claude API, MCP (Model Context Protocol), Claude Code, LangChain.js, RAG (pgvector), Tool / Function Calling, CRM Integrations, WhatsApp Cloud API
- **Databases:** MySQL, MariaDB, PostgreSQL, Supabase
- **DevOps & Cloud:** Docker, Git, CI/CD pipelines, Linux, AWS, GCP, DigitalOcean, Vercel
- **Testing:** PHPUnit, Pest, Vitest, Playwright
- **Architecture & Methodologies:** Hexagonal Architecture, Clean Code, SOLID Principles, Design Patterns, TDD

PROFESSIONAL EXPERIENCE

Full Stack Developer & Technical Support Lead | Medine.tech · in collaboration with Pensanomica (Panama) | Nov 2019 – Aug 2026

Engineered and optimized Flexio ERP, a multi-tenant cloud enterprise SaaS utilized by 100+ organizations across Latin America.

- Architected and implemented 30+ core ERP modules (accounting, purchasing, inventory, invoicing, operational workflows), building RESTful APIs in Laravel paired with reactive Vue.js and React frontends.
- Engineered complex SQL query refactoring and asynchronous batch jobs that cut massive report generation (500K+ records) from 18 hours to under 30 seconds (2,600x speedup), improving daily operational continuity for 100+ businesses.
- Developed an AI triage agent (Claude + MCP) integrated with the support CRM to automatically categorize, prioritize, and route ~15 daily customer tickets, significantly decreasing first-response time.
- Led a 3-person tier-3 technical support team, maintaining high availability and rapid incident resolution across multi-server environments handling 200+ concurrent active sessions.
- Implemented Two-Factor Authentication (2FA) platform-wide, hardening access security for thousands of corporate user accounts.

Full Stack Developer (Freelance) | Fractalcore | Jan 2023 – Jun 2024

Led end-to-end full-lifecycle development as sole engineer for two social assistance platforms in Mexico.

- Designed, built, and deployed AA México (aamexico.org.mx) and Plenitud AA (plenitudaa.org.mx) from scratch, utilizing Laravel for backend services, React for frontend interfaces, and containerized cloud hosting.
- Managed the complete development lifecycle: stakeholder requirements gathering, system architecture, database modeling, CI/CD deployment, and ongoing post-launch technical support.
- Successfully launched both applications into production serving active daily user bases with zero critical downtime.

FEATURED PROJECTS

- **chatIA (Corporate AI Assistant with RAG & Multi-Channel Messaging):** Autonomous enterprise AI assistant built with Next.js, LangChain, Gemini, and Supabase (pgvector). Retrieves real-time internal documentation and structured database records via web chat and asynchronous WhatsApp Cloud API webhooks.
- **ERP & eCommerce (Multi-Tenant Domain-Driven Platform):** Enterprise-grade ERP platform structured around Domain-Driven Design (Laravel 12, Inertia.js 2, React 19, Next.js, Docker). Manages inventory, multi-channel sales, and logistics with strict transaction isolation.
